■ Application Notice

• STORAGE

1. The solderability of the external electrode may be deteriorated if packages are stored where they are exposed to high humidity. Packages must be stored at 40°C or less and 70% RH or less.
2. The solderability of the external electrode may be deteriorated if packages are stored where they are exposed to dust or harmful gas (hydrogen chloride, sulfurous acid gas or hydrogen sulfide).
3. Packaging material may be deformed if packages are stored where they are exposed to heat or direct sun – light.
4. Minimum packages, such as polyvinyl heat – seal packages shall not be opened until just before they are used. If opened, use the reels as soon as possible.
5. Recommended products should be used within 6 months from the time of delivery. For those parts which passed more than 6 months shall be checked solderability before it is used.

• Transportation

Care should be taken when transporting or handling product to avoid excessive vibration or mechanical shock.
